

KAITSEPIIRE

- ◆ Paigalda kronstein ümber kerise kolme ribi nii, et kronsteini välimine serv puudutab kerise keermelati pead.
- ◆ Kinnita kronsteini pooled omavahel poldi ja mutriga. Pinguta polti piisavalt, et kronstein oleks tihedalt ümber kerise ribide.
- ◆ Paigalda kõik 8 kronsteini kerisele.
- ◆ Ühenda puitprofiilid piirdeks 4 nurga abil.
- ◆ Aseta puitpiire kronsteinidele ning kinnita need omavahel kruvidega. Piire ongi valmis!
- ◆ Hooldage kaitsepiirde puitosi hingava puidukaitsevahendiga, et pikendada nende eluiga. Kasutage ainult sauna jaoks mõeldud tooteid. Korrake hooldusprotseduure vähemalt kord aastas, kuid sageli saunas käies tuleks ka puitu sagedamini töödelda.

SAFETY RAILING

- ◆ Place the support around three ribs of the heater in a way that the outer side of the support is in contact with the heater rod head.
- ◆ Fix the support's two sides with a bolt and a nut. Tighten the bolt so that the support fits snugly around the heater ribs.
- ◆ Place all the 8 supports on the heater.
- ◆ Connect wood parts using 4 metal plates.
- ◆ Place the wooden railing on the supports and fasten with screws. Well done!
- ◆ Maintain the wooden parts of the guardrail with a breathable wood preservative to prolong its life. Use only products made for the sauna. Repeat the maintenance procedures at least once a year, but if you use the sauna often, you should also treat the wood more often.
